3110-91142-2 EXTREME BLACK III

Product Description
Lower gloss black powder Formulated to withstand continuous and intermittent service at elevated temperatures on ferrous and non-ferrous substrates. Good exterior durability.

*TCI recommends customer testing for product suitability for the application requirements, for evaluating application characteristics and mil thickness control, and compatibility with current products used in the application system.

Substrate Preparation
- Coating performance is influenced by type of substrate being coated and the type and quality of substrate preparation.
- Surfaces must be properly cleaned and free of organic and inorganic contaminants.
- Pretreatments designed for high temperature service can be used.
- For best results surfaces to be coated should be blasted in accordance with SSPC SP-10/NACE #2, ISO SA 2.5, with anchor profile of 0.75 to 1.5 mils.
- Contact pretreatment supplier for temperature limitations of current systems.

Powder Application

Cure Schedule:

<table>
<thead>
<tr>
<th>Metal Temperature</th>
<th>Time</th>
</tr>
</thead>
<tbody>
<tr>
<td>450° F</td>
<td>20 minutes</td>
</tr>
</tbody>
</table>

*Time part is at temperature

**Good properties can be achieved baking at 40 minutes at 425 F and 40 minutes at 400 F (metal temperature), however the resulting gloss will be 30-40%

Film Build:

<table>
<thead>
<tr>
<th>Minimum Thickness</th>
<th>Maximum Thickness</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.5 mils</td>
<td>2.5 mils</td>
</tr>
</tbody>
</table>

*Cure reaction byproducts will create surface defects if coating applied too thick. Speed of part temperature ramp-up influences maximum film thickness.

**Testing under actual conditions is highly recommended.

Equipment: Electrostatic application to room temperature substrate recommended.
Evaluate application parameters for improvement in film thickness uniformity
**Powder Properties**

Specific Gravity (SG) 1.76 +/- 0.05  
Theoretical Coverage at 1 mil: 109.7 ft²/lb  
Particle size D90: 85-100 μ

**Film Properties**

Tested at 2-3 mils on Cold Rolled Steel, 3 x 5 x 0.02

<table>
<thead>
<tr>
<th>Property</th>
<th>ASTM Standard</th>
<th>Result</th>
</tr>
</thead>
<tbody>
<tr>
<td>Gloss 60º</td>
<td>ASTM D523-14</td>
<td>20-29</td>
</tr>
<tr>
<td>Adhesion</td>
<td>ASTM D3359</td>
<td>5B</td>
</tr>
<tr>
<td>Direct Impact</td>
<td>ASTM D2794-90</td>
<td>40 in/lbs</td>
</tr>
<tr>

<td>Hardness</td>
<td>ASTM D3363</td>
<td>2H</td>
</tr>
<tr>
<td>1 hour exposure at 1000ºC</td>
<td>ASTM D3359</td>
<td>4B</td>
</tr>
</tbody>
</table>

Typical values when products are applied to CRS at 1.5-2.5 mils

**Storage:**

Store in cool, dry environment. Store below 80 F and below 60% humidity.  
Evaluate powder before application if stored over 12 months from manufacturing data.

**Caution:**

Adequate health and safety precautions should be observed during storage, handling, and application.  
Read SDS before using this product.

**Disclaimer:**

The technical data and suggestions for use in this product data sheet are currently correct to the best of our knowledge, but are subject to change without notice. Application and application conditions vary, and are beyond control of TCI, therefor TCI is not responsible for results obtained in using this product, even when used as suggested. The user should conduct tests to determine the suitability of the product for the intended use under the existing conditions.
